#### **✓ All API Routes**

- /api/executive-risk/calculate
- /api/ai-workforce/calculate

- /api/readiness/calculate
- /api/capture-lead

### Components & Infrastructure

- All React components
  - Database schema (Prisma)
  - Media assets (videos, images)
  - Configuration files
  - Type definitions
- 

## Branch Strategy

Your repository now has two branches:

1. `main` - Your SMB version (untouched, preserved)
2. `enterprise-development` - Your Enterprise version (just pushed)

This keeps both versions separate and safe!

---

## Important Note: Large Video File

GitHub detected a large video file:

- File: `nextjs_space/public/videos/process-hero.mp4` (59.77 MB)
- This exceeds GitHub's recommended 50 MB limit
- **The file was pushed successfully**, but you may want to consider:
  - Using Git LFS (Large File Storage) for large media files
  - Hosting videos externally (YouTube, Vimeo, CDN)
  - Compressing the video file

If you want to set up Git LFS, visit: <https://git-lfs.github.com/>

---

## Next Steps

### View Your Code on GitHub

Visit: <https://github.com/AICyberSecurity911/WBsite/tree/enterprise-development>

### Create a Pull Request (Optional)

If you want to merge the enterprise version into main later:

- Visit: <https://github.com/AICyberSecurity911/WBsite/pull/new/enterprise-development>
- This will let you review changes before merging

### Deploy Your Website

You can now deploy from GitHub to:

- Vercel (<https://vercel.com>)
- Netlify (<https://netlify.com>)

- GitHub Pages
- Your own hosting

## Continue Development

To continue working:

```
cd /home/ubuntu/quantumleap_enterprise
git pull origin enterprise-development
# Make your changes
git add .
git commit -m "Your changes"
git push origin enterprise-development
```

## Security Reminder

**Important:** Your Personal Access Token has been used and is no longer needed.

For security, you should:

1. Go to <https://github.com/settings/tokens>
2. Find the token you just created
3. Click “Delete” (or keep it if you plan to push more changes)

Your `.env` file with database credentials was **NOT** pushed (it's in `.gitignore`), so your secrets are safe.

## Repository Stats

- **Total Commits:** 9
- **Total Routes:** 18
- **Pages:** 11 (including blog posts)
- **API Endpoints:** 4
- **Components:** Multiple custom components
- **Build Status:** All routes compile successfully

## Summary

Your complete QuantumLeap AI Enterprise website is now safely backed up on GitHub in the `enterprise-development` branch. Your SMB version remains untouched on the `main` branch.

You can now:

- Access your code from anywhere
- Collaborate with team members
- Deploy to production
- Track changes with version control
- Create backups automatically

**Congratulations!** 🎉
